

CASE STUDY

Mobile application of dynamic passenger information (M2GOinfo)

COMPANY

CHALLENGE

The DYSTEN company modernized the Dynamic Passenger Information System (SDIP II) for the Górnośląsko-Zagłębiowskie agglomeration. DYSTEN was looking for a reliable IT partner who would quickly design and implement a mobile application to the expected quality, which was to complement the SDIP II web portal.

SOLUTION

The M2GOinfo application enables, among others:

- checking the location of vehicles and transport stops on the map,
- checking the current timetable for the selected stop or station,
- searching and presenting information about a selected communication line, stop or station,
- presentation of information about the selected vehicle regarding: direction, name of the nearest stop, planned arrival time, vehicle number, etc.,
- checking current announcements regarding public transport,
- searching for the most convenient connection between any two points.

BUSINESS EFFECT

The implementation of the mobile application was an important element of a broader project of developing public transport for the Górnośląsko-Zagłębiowskie Metropolis. By implementing the SDIP II project, the metropolis joined the group of modern regions supporting its residents with modern services that make their lives easier. The application significantly increased the comfort of travelers, including: thanks to real-time information and convenient and easy-to-use route planning. The friendly and aesthetic interface also allows you to receive real-time information about difficulties on a given route, which often allows you to plan your own journeys better.

Project in numbers

- **1000+ vehicles identified in real time**
- **20k+ app downloads from Google and Apple stores**
- **24/7 operation and application support**

About the client

DYSTEN is a leading Polish manufacturer of passenger information displays. He deals with the design, production and comprehensive implementation of projects within intelligent transport systems.

We started our cooperation by collecting detailed requirements, which INNOKREA translated into a modern graphic design. They responded to all our needs for changes on an ongoing basis. Having a dedicated team of specialists in various IT fields, they delivered the mobile application in the expected quality and on time. We recommend cooperation with this company!
